

CHEMGAS BARGING SARL

Luxembourg, Grand Duchy of Luxembourg

Chemgas Barging, a Jaegers Group company, has been using **XBEE Enzyme Fuel Technology** for years in their river barges. Their goal was to evaluate the cleaning effect of our natural fuel treatment in the engines.

Chemgas Shipping started to evaluate XBEE in 2011. They selected the motor barge *Blizzard* as she was used to have combustion problems.

Main characteristics of the *Blizzard*:

- Length over all: 108.00 metres;
- Width over all: 11.40 metres;
- Capacity: 2,287 m³.

In October 2012, Chemgas engineers could compare the endoscopic videos of the cylinders and were positively surprised by the results.

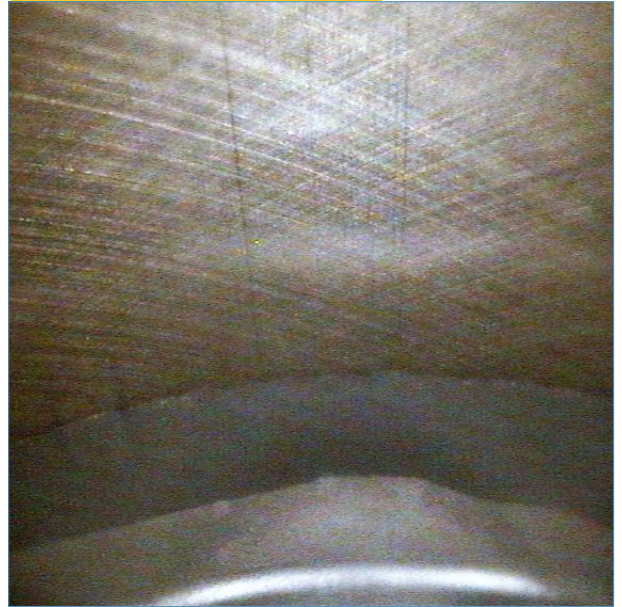

The superintendent of the company then decided to treat two more ships on the long term: the *Chinook* and the *Chamsin*.
